Adding an Ingress Rule

Adding an Ingress Rule

Navigate to Security List Settings:

Go to Network -> Virtual Cloud Network (VCN).

Select your VCN -> chose the relevant subnet -> go to security list.

Click Add Ingress Rule.

Configure Rule Settings:

Source CIDR: Set to 0.0.0.0/0 to allow incoming traffic from any IP address.

Source Port Range: Set to All to allow connections from any ephemeral port on the client's side.

Destination Port: Specify 80 to open HTTP access.

Protocol: Set to TCP (connection-oriented, ensuring reliable data transfer)

Notes:

There are many other ports and protocols available to enable if specific needs arise in the future.
